IN THE CLAIM

Please cancel Claims 1 to 6, without prejudice or disclaimer of the subject matter thereof, and add new claims 7, 8 and 9.

The added new claim 7 is based on the original claim 1 and the features in Fig. 1, 2, 3, 4, 5, and 7 of the present invention.

The added new claim 8 has the feature illustrated in Figs. 1 and 6. The added new claim 9 has the feature illustrated in Figs. 2.

The relation of the new claims with respect to the original claims are shown in the following REMARK, Examiners can read the claims more easily from the REMARK.

LIST OF CLAIMS:

Claims 1 to 6 (Cancelled)

Claim 7. (New) A ceiling fan blade of lifting type adapted to be mounted on a lifting mechanism of a ceiling fan motor; wherein the ceiling fan blade is defined at an upper side of a wind-receiving surface in parallel to radial direction with a front wind-receiving surface which forms an tangent angle with respect to horizontal line, next to the front wind-receiving surface sequentially formed with a wavy wind guide surface and a rear wind-receiving surface, the rear wind-receiving surface forming a tangent angle with respect to the horizontal line, the tangent angle of the rear wind-receiving surface being greater than that of the front wind-receiving surface;

wherein a projection of the ceiling fan blade is formed as an oblong shape with two long sides which are approximately parallel and two short sides;

wherein and any cross section of the ceiling fan blade parallel

to the long sides has an S shape;

wherein the front wind-receiving surface, wavy wind guide surface, and rear wind-receiving surface are arranged along the long sides; and the tangent angle of the rear-wind-receiving surface is greater than that of the front wind-receiving surface.

Claim 8. (New) The ceiling fan blade as claimed in claim 7, wherein any cross section of blade parallel to the short sides has an S shape.

Claim 9. (New) The ceiling fan blade as claimed in claim 7, wherein any cross section of the front wind receiving surface of the blade parallel to the short sides has a single arc shape.
